

LEX 1 & LEX 3

Simon Krek (Jožef Stefan Institute, Ljubljana, Slovenia)

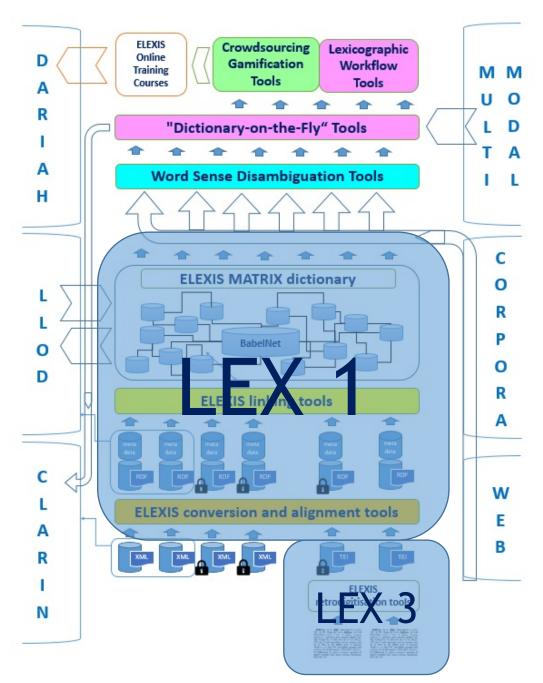

VIRTUAL ACCESS

LEX 1 – segmentation, conversion tools

- The LEX1 infrastructure will be set up during the project and will consist of several sets of tools:
- (1) tools for automatic **segmentation and structuring** of lexicographic content for dictionaries that are currently produced in digital environments and are encoded in their own custom data format.
- (2) conversion and alignment tools that will provide users of the infrastructure with the possibility to harmonise and convert their lexicographic resources to a uniform data format that allows their seamless integration in Linked Open Data.

LEX 1 – linking tools

- (3) linking tools that will provide conceptual interoperability, enabling linking of ELEXIS lexicographic resources.
- This will provide the possibility to **link** lexical **entries**, **senses** and fundamental **concepts** in different lexical resources, using a semi-automatic approach.
- BabelNet, as an existing multilingual resource to provide cross-lingual linking, will be exploited for this purpose.

LEX 1 – matrix dictionary = dictionary matrix

- (4) **ELEXIS matrix dictionary**: extensive linking of existing lexicographic resources by pivoting through BabelNet will enable the creation of what we call ELEXIS matrix dictionary -
- a universal **repository of linked senses**, meaning descriptions, etymological data, collocations, phraseology, translation equivalents, examples of usage and all other types of lexical information found in all types of existing lexicographic resources, monolingual, multilingual, modern, historical etc., available through a RESTful web service as **part of LEX1**.
- Freshly renamed: DICTIONARY MATRIX a matrix of dictionaries

LEX 3 infrastructure

- LEX3 infrastructure will be dedicated to retrodigitised dictionaries and will include
- (1) tools for automatic **segmentation and structuring** of content in retro-digitised dictionaries, and
- (2) Legacy Dictionary Viewer: a generic, modular dictionary publication tool for retrodigitised dictionaries which offers interfaces for the analysis and profiling of the underlying lexical data.
 - The viewer will allow users lexicographers and digital humanists alike to publish user-friendly, online editions or retrodigitised dictionaries without facing extensive technical or financial obstacles.

GROBID-dictionaries

- GROBID-Dictionaries is a GROBID sub-module, implementing a java machine learning library, for **structuring digitized lexical resources** and entry-based documents with encyclopedic or bibliographic content.
- It allows the parsing, extraction and structuring of text information in such resources.
- Presentation: Mohamed Khemakhem
- On GitHub: https://github.com/MedKhem/grobid-dictionaries
- ELEXIS installation: http://grobid.elex.is/
